M. bovis Dalton 2d RTX toxin A subunit.

(first entry)

29-MAY-2001

Moraxella, antigen; immune response; infection; RTX toxin; vaccine; antibacterial; A subunit.

Moraxella bovis.

WO200116172-A1.

08-MAR-2001

31-AUG-2000; 2000WO-AU01048.

99AU-0002571. 31-AUG-1999; (CSIR) COMMONWEALTH SCI & IND RES ORG. (UYME) UNIV MELBOURNE.

Tennent J; Farn J, Strugnell R,

WPI; 2001-235092/24. N-PSDB; AAF57290 Novel Moraxella bovis antigen useful in compositions for raising immune

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    840
                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                           9
                                                       The invention relates to new Moraxella bovis antigens and nucleic acid sequences encoding these antigenic polypeptides. The antigenic polypeptides and polynucleotides are useful for raising an immune response in an animal directed against Moraxella, preferably against M. bovis or M. catarrhalis, and for treating Moraxella infections. The present sequence represents the amino acid sequence of the A subunit of the RTX toxin from M. bovis Dalton 2d.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SRYAAYLANNIKFLSELNKELEAERVIAITQQRWDNNIGELAGITKLGERIKSGKAYADA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   invention. This sequence represents a chimeric protein containing the bovine interleukin-2 (IL-2) sequence and a leukotoxin sequence. The chimeric proteins of the invention comprise a cytokine, selected from IL-2 and gamma interferon (gamma IRN), linked to at least one RTX toxin epitope (preferably the sequence shown in AAW13865). The RTX toxin used to provide the epitope sequence is preferably a leukotoxin, especially the full-length Pasteurella haemolytica leukotoxin. Alternatively, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    leukotoxin is a truncated leukotoxin lacking leukotoxic activity, especially LKT352. The chimeric proteins can be used for the production if vaccines against respiratory diseases such as pneumonia, particularly fibrinous pneumonia caused by P. Daemolytica, including shipping fever in

immunogenic chimeric protein that comprises gamma-interferon (gamma-IFN) or an active fragment thereof, linked to an epitope of a Pasteurella haemolytica, are responsible for respiratory diseases in a range of agricultural animals, most particularly cattle, but also sheep, pigs, horses and fowl. Shipping fever is the most economically important respiratory disease associated with Pasteurella species, affecting respiratory disease associated with Pasteurella species, affecting exposed cattle and resulting in a 2-5% mortality rate in the exposed cattle and resulting in a 2-5% mortality rate in the specied population. The vaccine composition of the invention is is useful for preventing or ameliorating respiratory diseases such as pneumonia, particularly shipping fever pneumonia, in livestock. The present sequence represents a fusion protein comprising bovine interleukin-2 (IL-2) and pasteurella haemolytica leukotoxin, which may also be used as an anti-Pasteurella vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    13,

encodes fusion protein as vaccine for animal pneumonia Interleukin 2-leuko-toxin gene fusion useful

Claim 20; Fig 3; 68pp; English

The IL-2-LKT protein was encoded by a chimeric gene contg. the bovine IL-2 gene fused to the DNA encoding at least one epitope of leukorcoxin from P. haemolytica. IL-2-LKT was gel purified and ligated into the expression vector pdf433 lac1. The resulting clone pAA356 (ATCC 68386) contd. the desired gene fusion under the control of the E. coli lac promoter. The protein produced by the acceptable vehicle, e.g. a carrier homologous to, a rotaxirus VP6 inner capsid protein. The vaccine can be used for preventing or ameliorating respiratory diseases in animals e.g. shipping fever pneumonia

The vaccine alicits an enhanced immune response after challenge with Pasteurella haemolytica. The vaccines other component is a bacterial free culture supernatant derived from a culture of Pasteurella free the contraction.

The hmb gene fragment was taken from pRAP504 and starts at the codon for the 33 rd amino acid residue of ORF1. The haemin binding protein can be used in vaccines for preventing or treating H. somuus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis and pneumonia in

                                                                                                                        The lppB gene protein was expressed in E. coli as a fusion to the Pasteurella haemolytica leukotoxin gene lkth coded for by plasmid pAA512. The llpB gene fragment was taken from pMS11. LppB can be used in vaccines for preventing or treating H. somnus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis and pneumonia in vertebrates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         492 NITLDAKTGIIDISNSNGKKTQALHFTSPLLTAGTESRERLTNGKYSYINKLKFGRVKNW

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The hmb gene encoding the haemin-binding protein was expressed in E. coli as a fusion to the Pasteurella haemolytica leukotoxin gene lkth coded for by plasmid pAAJ52. The hmb gene fragment was taken from pRAFS01 and starts at the coden for the third amino acid residue of ORP1. The haemin binding protein can be used in vaccines for preventing or treating H. somnus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis and pneumonia in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      15 INSTKSGLKNLYLAIPKD--YDPQKGGTLNDFIKAADELGIARLAEEPNHTETAKKSVDT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            133 TALAGIELDSLIKKGDAAPDALAKASIDLINEIIGNLSQSTQTIEAFSSQLAKLGSTISQ 192
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 VIGNVTKAISSYVLAQRVAAGLSTTGAVAALITSSIMLAISPLAFMNAADKFNHANALDE 311
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              491
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      551
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        72
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The interval position on gels.

The LKT352 gene was prepd. as follows: lkth, an Mael fragment contg. the gene was prepd. as follows: lkth, an Mael fragment contg. the gene was ligated into the Smal site of pUC13 to form pAA19. From this, two constructs were made in the ptac-based vector, pGH432:lac1 digested with Smal. One, pAA342, consisted of the 5' Ahalli fragment from lkth while the other, pAA345, contained the entire Mael fragment. Clone pAA342 expressed a truncated leukotoxin peptide at high levels while pAA345 expressed full cleukotoxin at very low levels. The 3' end of the lkth gene of pAA345 was therefore ligated to Styl/Bamil digested hAA342 to yield pAA352 contg. the LKT32 sequence. The protein expressed from the vector can be used to prepare a subunit vaccine with cother P heemolylytica antigens, e.g. finbrial protein, plasmin creeptor or 50% outer membrane protein. The vaccines can be used to protect cattle from respiratory diseases such as pneumonia, esp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       : | | | : : | | : : : : | | | | |                                                                                                                                                 Gene libraries of P. haemolytica Al (strain B122) were constructed in lambda gtll and pUCl3. Resulting clones were used to transform E. coli and individual colonies were pooled and screened for reaction with serum from a calf which had survived a P. haemolytica infection and that had been boosted with a conc. culture supernatant of P. haemolytica to increase anti-leukotoxin antibody levels. Positive

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 99
                                                                   fragment was obtd. Progressively larger clones were isolated by chromosome walking to isolate full length recombinants of ca. 8kb, chromosome walking to isolate full length recombinants of ca. 8kb, in pAALI4. The clone was subjected to restriction enzyme dispestion to yield two clones, one expressing truncated leukotoxin peptide at high levels and the other expressing truncated leukotoxin at low levels. The 3' end of the lkth gene from the full length clone was ligated to the truncated gene clone to yield plasmid pAA352. The clone was used to produce chimeric proteins by gene fusion with an intigen coding sequence, e.g. the coding sequence of somatostatin, gonadotrophin releasing hormone or rotavirus viral protein 4, i.e. leukotoxin works as a carrier protein to bring about a larger amtigen acarrier protein to.bring about a larger commune response than the antigen alone. Immunisation with these antigened on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GDGHDRVFYSKDGGFGNITVDGTSATEAGSYTVNRKVARGDIYHEVVKRQETKVGKRTET

The vaccine pref. further comprises an immunogenic leukotoxin polypeptide, esp. an immunogenic Pasteurella haemolytica leukotoxin homologous to LKT352. Example 1.2 describes the prodn. of P. haemolytica recombinant leukotoxin from pAA352.

Two expression constructs were made. One, pAA352, contained the S4. Ahall fragment of the lkA gene, while the other, pAA345, contained the entire lktA gene. pAA342 expressed a truncated leukotoxin peptide at high levels, while pAA345 expressed full length leukotoxin at very low levels. Therefore, the 3' end of the lktA gene was ligated into pAA342, yielding plasmid pAA352. LKT352 or new leukotoxin is 98% homologous to authentic
                                                                                                                                                                                                                                                                                                                                                                         'accine, outer membrane protein; OMP; Haemophilus somnus; .ron regulated protein; leukotoxin; Pasteurella haemolytica;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NB: the protein sequence in Fig 5 comprises 926 amino acids,
however this protein is described in the text as having
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Haemophilus somnus outer membrane protein extract
